README.md

## 6. Lecture - Frontend

This week's lecture focuses on teaching you how to build a simple frontend for your dApp.

The repository contains the source code for both the Anchor program as well as the frontend of the ticket registry example created during the lecture.

## Development tools

---

- [Create Solana dApp](#) - Create a template with frontend and backend.
- [Codama](#) - Generate client library to interact with your program.

## Need help?

If you have any questions feel free to reach out to us on [Discord](#).
